Assignment # 1  
JAVASCRIPT

1. Write a script to greet your website visitor using JS alert box.

**Code:**

```
alert("Welcome to our website!");
```

**Output:**

```
-----  
| Welcome to our website! |  
|           OK           |  
-----
```

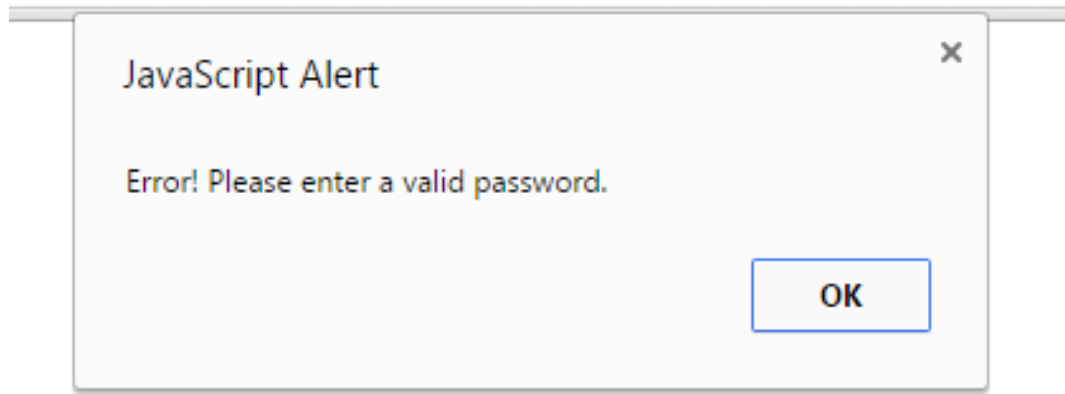

2. Write a script to display following message on your web page:

**Code:**

```
alert("Error! Please enter a valid password.");
```

**Output:**

```
-----  
| Error! Please enter a valid password. |  
|           OK           |  
-----
```

3. Write a script to display following message on your web page: (Hint : Use line break)

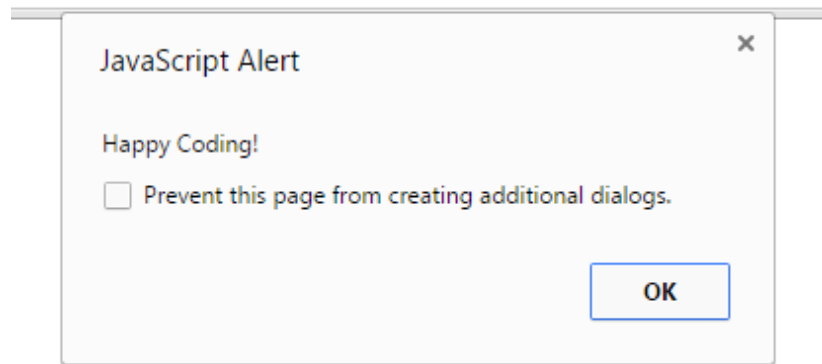

### Code:

```
alert("Welcome to JS Land...\nHappy Coding!");
```

### Output:

```
-----  
| Welcome to JS Land... |  
| Happy Coding!        |  
|           OK         |  
-----
```

4. Write a script to display following messages in sequence:

### Code:

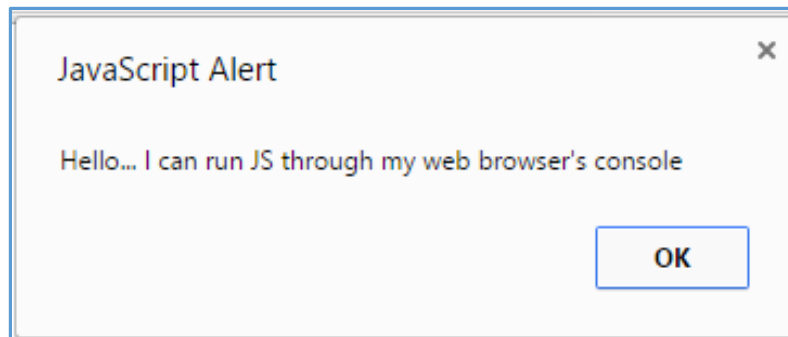

```
alert("Welcome to JS Land...");  
alert("Happy Coding!\nPrevent this page from creating additional dialogs.");
```

### Output:

```
| Welcome to JS Land... |  
|           OK          |  
|-----|
```

```
| Happy Coding!          |  
| Prevent this page from creating additional dialogs. |  
|           OK          |  
|-----|
```

5. Generate the following message through browser's developer console:

**Code:**

```
console.log("Hello... I can run JS through my web browser's console");
```

**Output:**

```
Hello... I can run JS through my web browser's console
```

6. Make use of alerts in your new/existing HTML & CSS project.

**Code:**

```
<html>
<head>
  <title>Alert Example</title>
</head>
<body>

<h2>Welcome to My Website</h2>

<script>
alert("Welcome to My Website!");
</script>

</body>
</html>
```

**Output:**

```
-----  
| Welcome to My Website! |  
|           OK           |  
-----
```

7. Practice placement of `<script></script>` element in following sections of your project in exercise 6:
- Head
  - Body (before your page's HTML)

**Code:**

```
<head>  
<script>  
alert("Script in Head");  
</script>  
</head>
```

**Output:**

```
Alert appears before the page loads.
```

### c. Body (inside your page's HTML)

```
<body>

<h1>Website</h1>

<script>
alert("Script Inside HTML");
</script>

<p>Hello World</p>

</body>
```

Heading appears first, then the alert appears.

### d. Body (after your page's HTML)

```
<body>

<h1>Website</h1>

<p>Hello World</p>

<script>
alert("Script After HTML");
</script>

</body>
```

Entire page loads first, then the alert appears.
