Assignment # 3
JAVASCRIPT

1. Declare a variable called **age** & assign to it your age. Show your age in an alert box.

Code:

```
var age = 20;  
  
alert("I am " + age + " years old.");
```

Output:

```
| I am 20 years old. |  
|           OK      |  
|-----|
```

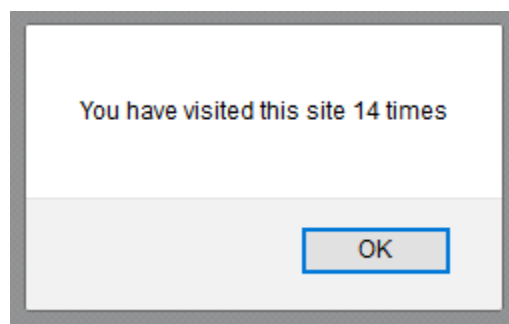

2. Declare & initialize a variable to keep track of how many times a visitor has visited a web page. Show his/her number of visits on your web page. For example: "You have visited this site N times".

Code:

```
var visitCount = 10;  
  
document.write("You have visited this site " + visitCount + " times.");
```

Output:

You have visited this site 10 times.

3. Declare a variable called ***birthYear*** & assign to it your birth year. Show the following message in your browser:

Code:

```
var birthYear = 2005;  
  
document.write("My birth year is " + birthYear + "<br>");  
document.write("Data type of my declared variable is number.");
```

Output:

```
My birth year is 2005  
  
Data type of my declared variable is number.
```

4. A visitor visits an online clothing store www.xyzClothing.com .
Write a script to store in variables the following information:

Code:

```
var visitorName = "John Doe";  
var productTitle = "T-shirt(s)";  
var quantity = 5;  
  
document.write(visitorName + " ordered " + quantity + " " + productTitle + " on XYZ Clothing store.");
```

Output:

```
John Doe ordered 5 T-shirt(s) on XYZ Clothing store.
```

- a. Visitor's name
- b. Product title

c. Quantity i.e.

d. how many products a visitor wants to order

Show the following message in your browser: “**John Doe** ordered 5 t-shirt(s) on xyz Clothing store”

Output:

```
(Alert Box)
I am 20 years old.

Question 2
You have visited this site 10 times.

Question 3
My birth year is 2005
Data type of my declared variable is number.

Question 4
John Doe ordered 5 T-shirt(s) on XYZ Clothing store.
```

John Doe ordered **5 T-shirt(s)** on XYZ Clothing store

-- END --
